技术规格

	Participates in signal transduction in hematopoietic cells.
	Adapter protein that functions as a negative regulator o

Background:	he cell surface. Acts as an E3 ubiquitin-protein ligase, w
	hich accepts ubiquitin from specific E2 ubiquitin-conjuga
	ting enzymes, and then transfers it to substrates promo
	ting their degradation by the proteasome. Recognizes a
	ctivated receptor tyrosine kinases, including PDGFA, EGF
	and CSF1, and terminates signaling.
Applications:	WB, IHC, IF
