| <b>Background:</b>        | The protein encoded by this gene has sequence similarity with members of the WD40 repeat-containing protein family. The WD 40 group is a large family of proteins, which appear to have a regulatory function. It is believed that the WD40 repeats mediate protein-protein interactions and members of the family are involved in signal transduction, RNA processing, gene regulation, vesicular trafficking, cytoskeletal assembly and may play a role in the control of cytotypic differentiation. |
