技术规格

Background:	Methyltransferase that adds a 2'-O-methyl group at the 3'-end of piRNAs, a class of 24 to 30 nucleotide RNAs that are generated by a Dicer-independent mechanism and are primarily derived from transposons and other repeated sequence elements. This probably protects the 3'-end of piRNAs from uridylation activity and subsequent degradation. Stabilization of piRNAs is essential for gametogenesis.
Applications:	ELISA, IHC
Name of antibody:	HENMT1
Immunogen:	Fusion protein of human HENMT1
Full name:	HEN1 methyltransferase homolog 1
Synonyms:	HEN1; C1orf59
SwissProt:	Q5T8I9

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human ovarian cancer
IHC Recommend dilution:	40-200
