| Background:        | This gene is a member of the insulin-like growth factor binding p rotein (IGFBP) family and encodes a protein with an IGFBP domain n and a thyroglobulin type-I domain. The protein binds both insul in-like growth factors (IGFs) I and II and circulates in the plasma in both glycosylated and non-glycosylated forms. Binding of this p rotein prolongs the half-life of the IGFs and alters their interaction with cell surface receptors. |
