### 技术规格

<b>Background:</b>	The cytoplasmic peripheral membrane protein encoded by this gene functions as a protein-tyrosine kinase substrate in microvilli. As a member of the ERM protein family, this protein serves as an intermediate between the plasma membrane and the actin cytoskeleton. This protein plays a key role in cell surface structure adhesion, migration and organization, and it has been implicated in various human cancers. A pseudogene located on chromosome 3 has been identified for this gene. Alternatively spliced variants have also been described for this gene.
<b>Applications:</b>	WB
<b>Name of antibody:</b>	EZR(Phospho-Tyr146)

<b>Immunogen:</b>	Peptide sequence around phosphorylation site of tyrosine 146 (S-G-Y(p)-L-S) derived from Human Ezrin.
